

Care & Handling Notes

Snoopy HQ Journal — demonstration attachment · sample content only · four pages

1. Storage

Keep printed material flat and away from direct light. Relative humidity between 45% and 55% suits paper, tinware and ceramics alike. Rotate items on display every eight weeks so no single piece carries the full exposure of a season.

Boxes matter more than shelves. An acid-free box with a loose lid outperforms an open shelf in almost every room of an ordinary house, and it costs less than the item it protects.

Environmental targets

Measure	Target	Tolerance
Temperature	18 °C	±3 °C
Relative humidity	50%	±5%
Light (display)	50 lux	8 weeks maximum
UV	Filtered	—

2. Cleaning

Dry dust first, always. A soft brush lifts more than a cloth and leaves no fibres behind. Water belongs nowhere near printed tin; for ceramics, a barely damp cloth and immediate drying is enough.

If a method needs a solvent, it needs a conservator. Nothing on these shelves is worth a irreversible mistake made on a Sunday afternoon.

By material

Material	Method	Never
Printed tin	Soft brush, dry	Water, abrasives
Glazed ceramic	Barely damp cloth	Dishwasher, soaking
Paper	Brush, gentle	Tape, erasers
Plush	Vacuum through mesh	Machine wash

3. Condition grades

Grades are recorded at every audit and never adjusted upward without a photograph to justify it.

Grade	Meaning	Action
Excellent	No visible wear	Display or store
Good	Light shelf wear	Display, review yearly
Fair	Visible fading or dents	Store flat, no display
Poor	Structural damage	Seek conservation advice

Recording a change

Write the observation, not the conclusion. “Lid no longer seats on the left corner” is useful in five years; “slightly damaged” is not.

4. Audit cycle

A full count runs each July. Between audits, log every movement in the inventory sheet — the shelf column is only useful if it is true.

Schedule

When	Task	Owner
Weekly	Dust displayed items	Studio
Every 8 weeks	Rotate display	Studio
Quarterly	Spot-check 20 records	Studio
July	Full audit and photography	Studio

The audit closes when every item on the sheet has been seen, not when the calendar says July is over.
